BHABHA UNIVERSITY, BHOPAL (M.P.)

**BHABHAENGINEERINGRESEARCHINSTITUTE-MCA,
BHOPAL**

MASTER OF COMPUTER APPLICATIONS

CERTIFICATE

This is to certify that Avinash Kumar of MCA III Semester is sincere and has worked under my guidance and completed the project timely and sincerely.

The project title, “Food-oder-app-avi” is being fulfilled to the requirement for the degree of “Master of Computer Application” (MCA) prescribed by BHABHA UNIVERSITY, BHOPAL. They are found to be persevering in their efforts and have displayed professional conduct in their work. We wish them every success in their future.

BHABHAENGINEERINGRESEARCHINSTITUTE-MCA, BHOPAL

MASTER OF COMPUTER APPLICATIONS

DECLARATION

I am Avinash Kumar student of Master of Computer Application, Bhabha Engineering Research Institute-MCA, Bhopal hereby declare that the work presented in this Major Project is outcome of my own work, and is correct to the best of my knowledge and this work has been carried out taking care of Engineering Ethics. The work presented does not infringe any patented work and has not been submitted to any University for the award of any degree or any professional diploma.

Avinash Kumar
Enrollment No.09CA241MC047

ACKNOWLEDGEMENT

At the outset, I express our deepest gratitude to **Bhabha Engineering Research Institute-MCA, Bhopal** for providing me the dynamic opportunities and best facilities to work.

I am grateful to my Principal Dr. Deepa Bakhshi HOD Dr. Gaurav Pandey & Project Guide Dr. Gaurav Pandey under whose guidance we successfully completed our project. They willingly took the trouble of sparing his valuable time for our project and were always ready to help with his technical knowledge and valuable suggestions.

I will fail in my duties if I don't acknowledge the valuable advice received from my teachers in the institution from time to time.

I also express our gratitude to all those who guided us helped us in preparation for this project report.

Last, but not least, I am thankful to fellow students who encouraged me by taking a keen interest in my project work.

Avinash Kumar

1. INTRODUCTION

Gourmet Go is a premium food ordering web application designed to bring a high-quality user experience to online food delivery. The project aims to bridge the gap between hungry customers and high-quality restaurants through a seamless, visually enhanced digital interface.

The application primarily focuses on user experience, offering a sleek, dark-themed responsive design where users can browse a categorized menu, add items to a cart, and proceed to checkout. It solves the common problem of clunky, slow, or unattractive food ordering interfaces by utilizing modern web technologies.

1.1 Purpose

The purpose of this project is to develop a functional prototype of a food delivery frontend that demonstrates proficiency in modern web development standards (HTML5, CSS3, JavaScript) and user interface design principles.

1.2 Scope

The scope includes the development of the client-side interface, including:

- Home Page with Hero Section
- Interactive Menu with Categories
- Shopping Cart Functionality
- User Authentication (Login/Signup Simulation)
- Responsive Design for Mobile and Desktop

2. SYSTEM ANALYSIS

The system is designed as a Single Page Application (SPA) feel using standard multi-page architecture. It relies on the client-side browser to handle logic such as cart management

and routing between pages.

2.1 Existing System

Traditional food ordering often requires phone calls or visiting physical locations. Existing web solutions can sometimes be cluttered. This system simplifies the process into a visual-first approach.

2.2 Proposed System

The proposed system automates the selection and calculation process. It provides instant visual feedback (animations, cart updates) and ensures data persistence using Local Storage so users don't lose their cart if they refresh the page.

3. LITERATURE SURVEY

A study of existing successful platforms like Zomato, Swiggy, and UberEats reveals that User Interface (UI) and User Experience (UX) are critical for retention. Users prefer:

- Fast load times
- Clear imagery
- Simple checkout flows

Gourmet Go incorporates these findings by implementing lazy loading (conceptual), optimized CSS for fast rendering, and a "Cart Drawer" pattern popular in modern e-commerce.

4. SOFTWARE REQUIREMENT SPECIFICATION (SRS)

4.1 Functional Requirements

- **User Registration/Login:** Users must be able to create an account and log in.
- **Browse Menu:** Users must be able to filter food items by category.
- **Cart Management:** Add/Remove items and see total price.

4.2 Non-Functional Requirements

- **Performance:** The site should load within 3 seconds.
- **Reliability:** Cart data should persist across sessions.
- **Usability:** The interface must be intuitive for non-technical users.

4.3 Hardware Requirements

- Any standard PC or Laptop (i3 Processor or above)
- 4GB RAM minimum
- Internet Connection for hosting

4.4 Software Requirements

- **OS:** Windows/Mac/Linux
- **Browser:** Google Chrome / Firefox / Safari
- **Development Tools:** VS Code, Git

5. SOFTWARE SELECTION CRITERIA

The technology stack was chosen for its ubiquity and performance:

- **HTML5:** For semantic structure.
- **CSS3:** For styling, animations, and responsive layout without heavy frameworks.
- **JavaScript (ES6+):** For logic and DOM manipulation.

6. PROJECT PLANNING

The project was executed in the following phases:

1. **Requirement Gathering:** Understanding what features are needed.

2. **Design Phase:** Creating the UI/UX mockups and color palette selection.
3. **Implementation:** Coding the HTML structure, then CSS styling, then JS logic.
4. **Testing:** Verifying functionality across devices.
5. **Deployment:** Hosting the application on GitHub Pages.

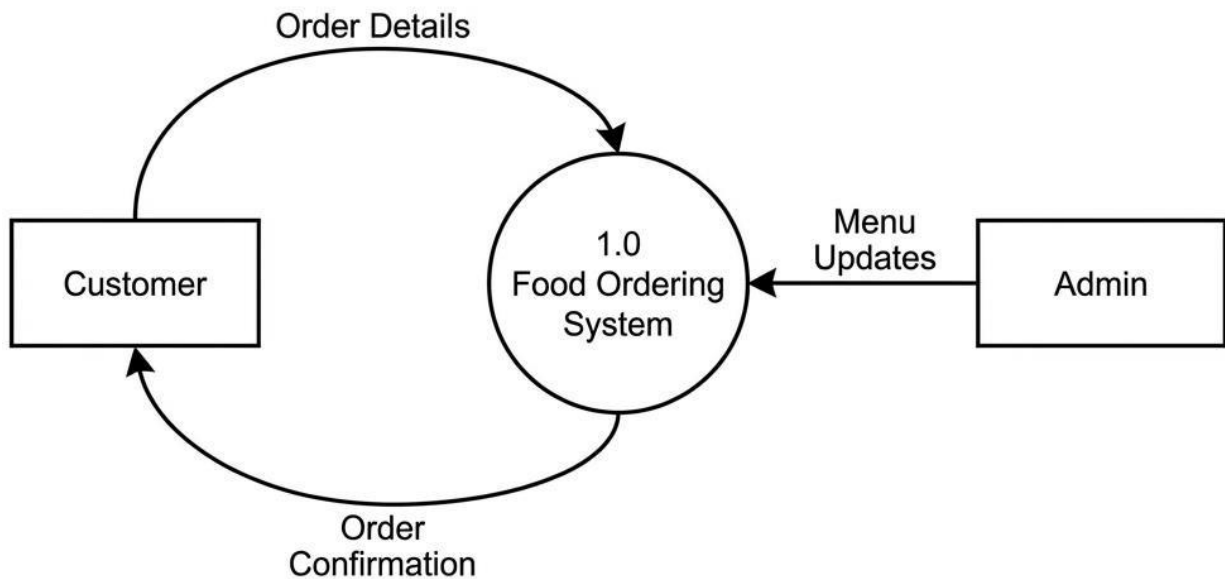

7. DATA FLOW DIAGRAM (DFD)

Level 0 DFD:

User <-> [Food Ordering System] <-> Admin

Level 1 DFD (User Flow):

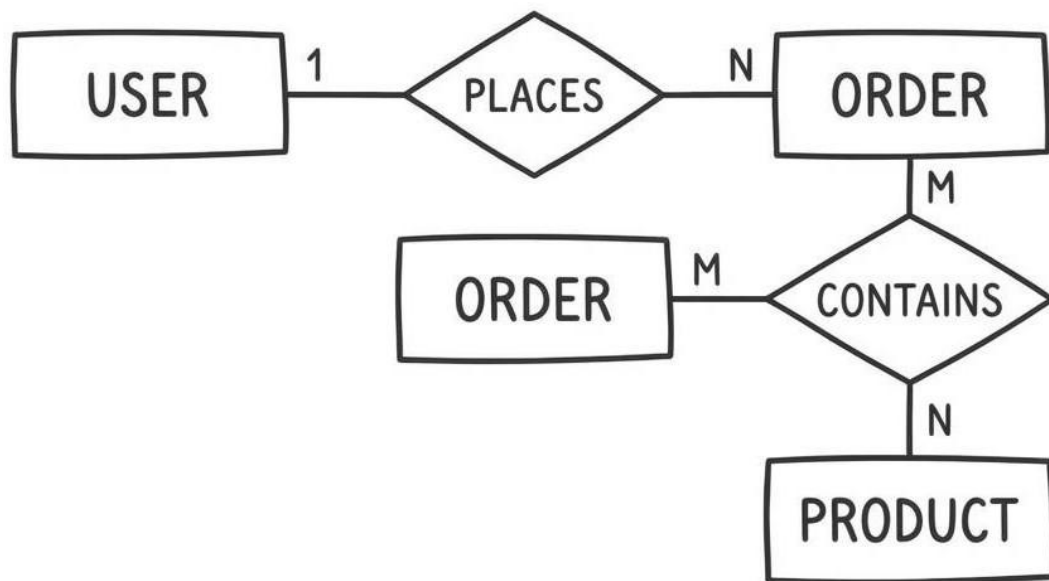

- User -> Log In -> Verify Credentials -> Access System
- User -> Select Items -> Add to Cart -> Update Total
- User -> Checkout -> Confirm Order -> Generate Receipt

8. ER DIAGRAM

The application uses a simple data model focused on Users and Orders.

- **USER:** UserID, Name, Email, Password, Mobile
- **PRODUCT:** ProductID, Name, Price, Category, Image
- **ORDER:** OrderID, UserID, Total Amount, Status

9. DATA DICTIONARY

Field Name	Data Type	Description
username	String	Name of the user
password	String	Encrypted password string
email	String	Unique email identifier
mobile	Number (10)	User contact number
cart items	Array	List of product objects in cart

11. DESIGNING

The design follows a "Dark Mode" aesthetic which is popular in modern applications for reducing eye strain and increasing visual appeal of food images.

Key Design Elements:

- **Gradient Text:** Used on headings for emphasis.
- **Glassmorphism:** Translucent backgrounds on cards and navigation to give a depth effect.
- **Floating Animations:** Images in the hero section float to create a dynamic feel.

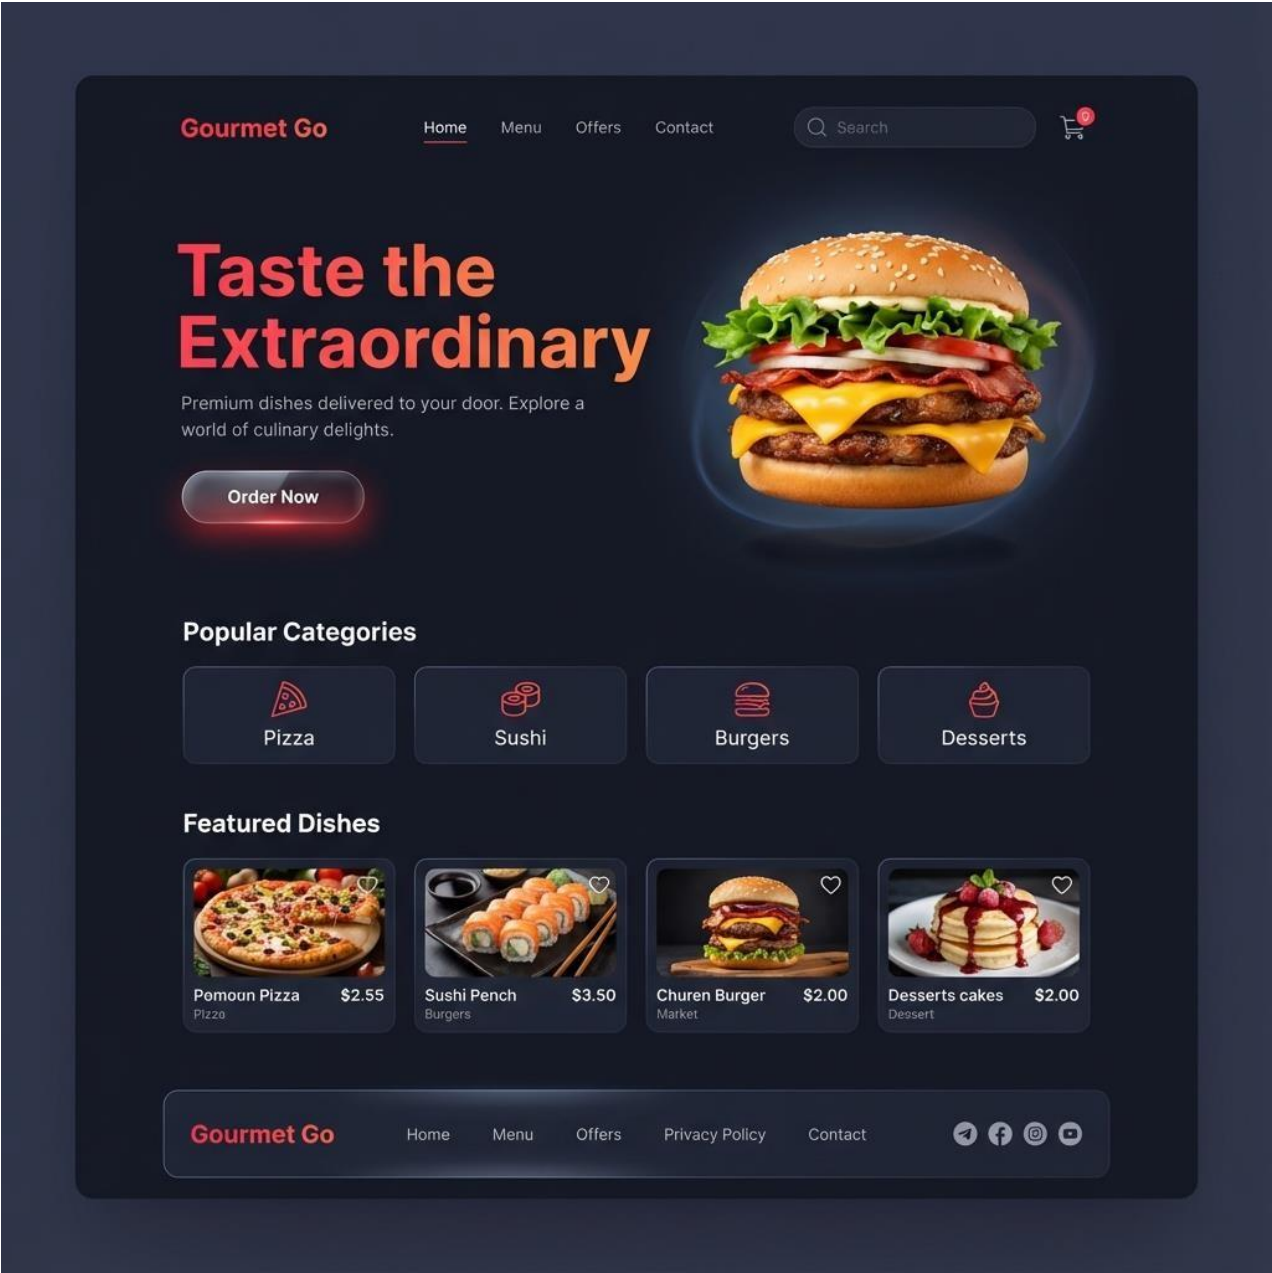

12. USER MANUAL

1. **Open the Website:** Navigate to the hosted URL.
2. **Sign Up:** Click on the Login icon or "Order Now" to be prompted for authentication if not logged in. Navigate to "Sign Up" tab.
3. **Browse Menu:** Use the category buttons (Burger, Pizza, etc.) to filter items.
4. **Add to Cart:** Click "Add" on any item. It will appear in the cart icon count.
5. **Checkout:** Open the cart sidebar and click "Checkout".

13. OUTPUT SCREEN

Below are the screenshots of the working application.

14. OUTPUT REPORTS

Since this is a client-side project, reports are generated in the form of User Feedback confirmation

and Order Summary shown in the checkout alert.

15. COMMON ERRORS AND EXPLANATIONS

- **404 Not Found:** Occurs if the hosting URL is incorrect. Solution: Check the GitHub Pages settings.
- **Images not loading:** Caused by incorrect file paths. Solution: Used relative paths (e.g., ./images/).
- **Form Validation Error:** If password is too weak. Solution: Follow the helper's text instructions carefully.

16. LIMITATIONS

- **No Backend:** Data is stored in the browser's Local Storage, so it is lost if the cache is cleared or a different device is used.
- **Static Menu:** The menu items are hardcoded in JavaScript; there is no Admin Panel to add new items dynamically without code changes.

17. FUTURE ENHANCEMENT / CONCLUSION

Conclusion: The project successfully demonstrates a modern, responsive frontend for a food delivery service. It meets all functional requirements for a minor project.

Current Published URL: <https://avinash.github.io/Food-oder-app-avi/index.html>

Future Enhancements:

- Integration with a backend (Node.js/Express) and Database (MongoDB).
- Real-time payment gateway integration (Stripe/Razorpay).
- Admin Dashboard for restaurant owners to manage orders.
